

Business Systems Analysis Certificate

BA-03: Requirements Analysis Course

This course is one of our strongest courses. It goes into the details of requirements analysis step-by-step starting from high level business needs all the way down to detailed system requirements and functional design. The course is a hands-on full of practical information, examples, case studies, and tips on how to tweak each technique.

Other participants who took this course found it to be enlightening, entertaining, and a milestone in their career that revolutionized the quality of their deliverables and facilitated their day-to-day work.
